Tez Özeti:

Bu çalışmada; fasyal sinir paralizilerinde uygulanan cerrahi tedavilerin sinir iyileşmesi üzerine etkilerini incelemek amacıyla, 1985-1988 yılları arasında Ankara Numune Hastanesi 2. KBB Kl.n.ğ.ne başvuran çeşitli sebeplere bağlı fasyal paralizi gelişmiş, ve cerrahi yolla tedavi edilmiş 34 hastadan kontrolleri yapılabilen 23 hasta incelenmiştir. Hastalara uygulanan cerrahi tedaviler; fasyal sinir dekompresyonu, serbest sinir grefti, ven grefti ve lateral anastomoz olarak dört grupta yapılmıştır.

Hastalar postoperatif dönemde 3 ay, 6 ay, 6-24 ay sonunda fasyal fonksiyonlarda düzelme oranları açısından klinik ve elektromiyografik olarak incelenmiştir. Yapılan incelemelerde fasyal fonksiyonlarda tatminkar düzelme oranları dekompresyon ameliyatlarından sonra %85, Lateral anastomoz ameliyatlarından sonra %66,6 olarak bulunmuştur.
